

Ahmed Hagar

Emerging full-stack web developer capable of creating responsive front-ends, coding back-ends, and designing databases. Always eager to learn and collaborate with others.

PROJECT EXPERIENCE (FIND MORE IN GITHUB)

Newbourhood — *Developer, Sept-Oct 2021*

A Python/Django web app that lists all housing data in the Toronto area. As a team project, my role includes creating the views, templates, and writing fetch API calls to fetch the Open City GeoJson data to present Toronto's neighbourhoods on a Leaflet map.

SafeDine — *Developer, Aug-Sept 2021*

A Next.js/React single page web application using Yelp's and the Google Maps APIs to search for restaurants near the user's given location. I created the components, used NPM packages, made the fetch API calls, form handling to manipulate API parameters with user inputs, and passed state between components.

LibraryCMS — *Developer, Jun - Jul 2021*

A content management system for librarians to manage a multi-location library system. Using ASP.NET, Code First Migrations with SQL Server, OOP and the MVC model, the app allows users to view, add, edit, and delete books, locations, and registered users to the database.

PREVIOUS WORK EXPERIENCE (FIND MORE IN LINKEDIN)

Annex Gleaner — *Freelance Writer, Feb 2018- Oct 2019*

Wrote and edited for a local newspaper serving Toronto's Annex neighbourhood. Coverage ranged from municipal politics, housing and building projects, and community events. Collaborated with editors and other writers on pitching story ideas.
